# PRODUCT DATA SHEET

# Sikalastic<sup>®</sup> M 640

(formerly MSeal M 640)

Cost effective, one-component, liquid applied, polyurethane based, waterproofing membrane

## DESCRIPTION

Sikalastic<sup>®</sup> M 640 is a ready-to-use, one-component, cold applied, low viscosity polyurethane base, elastomeric membrane for roof waterproofing. Sikalastic<sup>®</sup> M 640 cures to form a seamless and durable waterproofing membrane, suitable for exposed roof areas and structure.

## USES

Sikalastic<sup>®</sup> M 640 may only be used by experienced professionals.

Designed for the following waterproofing applications:

- Roof waterproofing for new constructions and refurbshment projects
- Waterproofing of roofs, balconies and terraces
- Waterproofing structures with numerous details such as penetrations, drains, roof lights and complex geometry
- Waterproofing existing substrates (e.g. concrete, bituminous membrane, asbestos cement, metal, wood, unglazed ceramic tiles)
- For exterior use only

# **CHARACTERISTICS / ADVANTAGES**

- One-component, easy and ready to use
- Cold applied requires no heat or flame
- Seamless membrane
- Excellent crack bridging ability, even at low temperatures
- High elasticity and flexibility
- Thermal resistance, the product retains its properties even at high temperatures
- Resistance to cold temperatures: The Product retains its elasticity even at -20 °C
- Easily recoated if needed no need to remove the existing one
- Vapour permeable, allows substrate to breathe
- Easy to apply, low viscosity
- Economic provides a cost efficient life cycle extension of failing roofs

# **APPROVALS / STANDARDS**

 CE Marking and Declaration of Performance to European Technical Assessment (ETA) No 24/0043 based on ETAG 005 Part 6 – Liquid-applied roof waterproofing using kits based on polyurethane.

# PRODUCT INFORMATION

| Chemical Base      | Elastomeric aromatic polyurethane  |  |
|--------------------|--|--|
| Packaging          | 1.0 kg, 6.0 kg and 25.0 kg metal pails   |  |
| Colour             | White, Grey and Terracota  |  |
| Shelf Life         | 12 months from date of production  |  |
| Storage Conditions | The Product must be stored in original, unopened and undamaged pack-<br>aging in dry conditions at temperatures between +5 °C and +25 °C. Higher<br>storage temperatures may reduce shelf life of product. Always refer to<br>packaging.<br>Refer to the current Safety Data Sheet for information on safe |  |

|                             | Maximum                    | +90 °C |                |

## SYSTEM INFORMATION

Systems

#### **Reinforced Roof Waterproofing**

Sikalastic<sup>®</sup> M 640 is applied in one coat reinforced with Sika<sup>®</sup> Reemat Premium or Sikalastic<sup>®</sup> Fleece and sealed with a further coat of Sikalastic<sup>®</sup> M 640

| Layer         | Product   | Consumption                |
|---------------|---|----------------------------|
| Primer        | Refer to below primer table                     | Refer to PDS of the primer |
| Base coat     | Sikalastic <sup>®</sup> M 640                   | ≥1.0 kg/m <sup>2</sup>     |
| Reinforcement | Sika® Reemat Preemi-<br>um / Sikalastic® Fleece | _                          |
| Second coat   | Sikalastic <sup>®</sup> M 640                   | ≥0.8 kg/m <sup>2</sup>     |
| Top coat      | Sikalastic®-670 TC /<br>Sikalastic®-701         | ≥0.3 kg/m²                 |

**Note:** Sikalastic<sup>®</sup>- 670 TC / Sikalastic<sup>®</sup>-701 is not required to not exposed roofs.

#### Non-reinforced Roof Waterproofing

Sikalastic® M 640 is applied in 1 or 2 coats

| Layer               | Product                         | Consumption            |
|---------------------|---------------------------------|------------------------|
| Primer              | Refer to below primer           | Refer to PDS of the    |
|                     | table                           | primer                 |
| Base coat           | Sikalastic <sup>®</sup> M 640   | 0.80 kg/m <sup>2</sup> |
| Second coat         | Sikalastic <sup>®</sup> M 640   | 0.70 kg/m <sup>2</sup> |
| Top coat (optional) | Sikalastic <sup>®</sup> -670 TC | ≥0.3 kg/m <sup>2</sup> |
|                     | / Sikalastic®-701               |                        |

**Note:** For the consumption rates and waiting time / overcoating please refer to the PDS of the appropriate product.

**Note:** It always recommended to apply a top coat, in order to increase system perfomance.

**BUILDING TRUST** 

# **BASIS OF PRODUCT DATA**

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

## LIMITATIONS

Installation work must only be carried out by Sika trained and approved contractors, experienced in this type of application.

- Do not use Sikalastic<sup>®</sup> M 640 for indoor applications.
- Do not apply Sikalastic<sup>®</sup> M 640 on substrates with rising moisture.
- Do not dilute Sikalastic<sup>®</sup> M 640 with any solvent.
- Do not apply Sikalastic<sup>®</sup> M 640 close to the air intake vent of a running air conditioning unit. Switch-off units and seal intakes before applying.
- On substrates likely to exhibit outgassing, apply Sikalastic® M 640 during falling ambient and substrate temperature. If applied during rising temperatures "pin holing" may occur from rising air.
   Do not apply Sikalastic® M 640 directly on Sikalastic®
- Do not apply Sikalastic<sup>®</sup> M 640 directly on Sikalastic<sup>®</sup> Insulation boards. Instead use Sikalastic<sup>®</sup> Carrier between Sikalastic<sup>®</sup> Insulation board and Sikalastic<sup>®</sup> M 640.
- Areas with high movement, irregular substrates, or timber based roof decks require a complete layer of Sikalastic<sup>®</sup> Carrier.
- Sikalastic<sup>®</sup> M 640 is not suitable for permanent water immersion.
- Volatile bituminous materials may stain and/or soften below the coating.
- Sikalastic<sup>®</sup> M 640 may exhibit slight chalking at the surface – do not use run off water for live fish tanks, etc.
- Low melting point bituminous materials may need priming – using a darker shade also helps hide any staining from the volatiles.

# ECOLOGY, HEALTH AND SAFETY

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet (MSDS) containing physical, ecological, toxicological and other safety-related data.

## REGULATION (EC) NO 1907/2006 - REACH

## **APPLICATION INSTRUCTIONS**

#### EQUIPMENT

#### Substrate preparation equipment

- Abrasive blast cleaning / planing / scarifying or grinding equipment
- High pressure power washer
- **Mixing Equipment**
- Electric single paddle mixer
- Application Equipment
- Brush
- Roller
- Airless spray

Product Data Sheet Sikalastic® M 640 October 2024, Version 03.01 02091500000002012

### SUBSTRATE QUALITY

Concrete substrates must be sound and of sufficient compressive strength ( $\ge 25 \text{ N/mm}^2$ ) with a minimum pull off strength of 1.5 N/mm<sup>2</sup>

#### SUBSTRATE PREPARATION

The surface must be of sufficient structural strength, clean, dry and free of dirt, oil, grease and other contamination. Depending on the material the substrate must be primed and mechanically cleaned. Grinding may be necessary to level the surface. Complete roof system must be designed and secured against wind uplift loadings.

Refer to the Sika Method Statement: Sikalastic<sup>®</sup> M 640 Suitable substrates are such as: concrete, bituminous membrane, metal, asbestos cement, unglazed ceramic tiles and wooden substrates.

#### MIXING

Prior to application, stir Sikalastic<sup>®</sup> M 640 gently but thoroughly at least for 1 minute in order to achieve a homogeneous mixture.For mixing, an electric single paddle mixer (300-400 r.p.m.) with a spiral blade can be used. Over mixing must be avoided to minimize air entrainment.

### APPLICATION

Prior to application, confirm substrate moisture content, r.h. and dew point.

Prior the application of Sikalastic<sup>®</sup> M 640 the priming coat must have cured, tack-free. For the Waiting Time / Overcoating please refer to the PDS of the appropriate primer.

**BUILDING TRUST** 

#### **No-Reinforced Roof Waterproofing:**

Sikalastic<sup>®</sup> M 640 is applied in two coats. Prior to the application of the 2nd coat the indicated waiting time of overcoating shall be allowed. Roof coatings may need partial reinforcement over areas of stress or expected movement e.g. joints, overlaps, detailing, crack bridging etc. Use Sika<sup>®</sup> Joint Tape SA or strips of Sika<sup>®</sup> Reemat Premium / Sikalastic<sup>®</sup> Fleece. For joints with moderate movement e.g. Metal Sheet use Sika<sup>®</sup> Flexitape Heavy incorporating bond-break or Sika<sup>®</sup> Joint Tape SA.

#### **Reinforced Roof Waterproofing:**

Sikalastic<sup>®</sup> M 640 is applied in combination with Sika<sup>®</sup> Reemat Premium / Sikalastic<sup>®</sup> Fleece. Over-coating of bitumen membranes has to be fully reinforced. **1**. Apply the first coat, for correct consumption refer to the table of the relevant system of Sikalastic<sup>®</sup> M 640. Work only so far in advance that the material stays liquid.

2. Roll in the Sika® Reemat Premium / Sikalastic® Fleece and ensure that there are no bubbles or creases. Overlapping must be a minimum 5 cm and ensure overlaps are sufficiently wet to bond.
3. The roller may require only a little extra material to

keep wetted but no further significant material needs to be added at this stage.

**4.** After the coat is dry enough to walk on, seal the roof area with second coat of Sikalastic<sup>®</sup> M 640 at a minimum consumption of the revelant system. Always begin with details prior starting with water-proofing the horizontal surface. For details follow step **1-4**.

**Note**: The applicator must wait 6 - 24 hours between coats. If the overcoating time is exceeded, more than 3 days, Sika® Reactivation Primer, Sika® Concrete Primer or Sikalastic®-1 C Primer PU must be applied at a consumption rate of ~100 g/m<sup>2</sup>.

#### **CLEANING OF TOOLS**

Clean all tools and application equipment with Sika<sup>®</sup> Thinner C immediately after use. Hardened or cured material can only be removed mechanically.

## LOCAL RESTRICTIONS

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.
